CANTILEVER

Guardrail "C" Section Kick Flat System is usually available ex-stock in approximately 3000mm or 6000mm random lengths that can either be cut on site or shop fabricated to suit customer requirements.

These coupled with 'U' type post connections give a flexible and easy to fit product that can be part of a new installation or retro fitted to bring existing areas up to the requirements of the latest regulations.

The Standard recommended method of connection does not show any fixings on the pedestrian side of walkways and as such gives platforms a tidy, clean and linear "look". As this product lends itself to being easy to line / level / fix installation times are short.
